

African Biodynamic Trainers Workshop

Kufunda Village, Zimbabwe, October 18- 22, 2022

Soil Fertility - The Biodynamic Training Approach

Join us for the first ever African Biodynamic Trainers workshop to support the strengthening of biodynamic training in Africa and beyond. Together we will explore the essence of transformation enabled through biodynamic training, education, and capacity development. New and active trainers will deepen in to how the theme of soil fertility can be learned in a holistic approach that brings new questions and deep enthusiasm. We look forward to a workshop where the trainers themselves can enrich their vitality, to accompany people who develop the farm vitality. This means we will also include moments of meditation and nature awareness exercises and thereby gather new strength for ourselves and our movement. This event is set to be a first of series of workshops to develop biodynamic trainers network.

Future and current teachers will gather for 5 days at Kufunda Village in Zimbabwe, to be in shared learning around how we can improve our capacity for Biodynamic Training.

Included in the 5 days is a 1,5 day open BD workshop on Soil Fertility for farmers and interested people, where we as BD trainers can teach different aspects of building soil fertility. The workshop will be an opportunity to practice bringing different ways of working with soil from a Biodynamic approach. We aim at bringing holistic ways of learning, working with the whole human being. We will include work with perception and training of our senses, as well as practical learning for increasing soil fertility.

Fee: 175 USD. Partial scholarships are available.

Call for Contributions

We warmly invite all Biodynamic trainers & newcomers in BD training to present holistic training modules related to SOIL FERTILITY integrating head, heart, hand & sensory perception at the African BD trainer workshop.

Our goal is to co-create onsite demonstration of training approaches followed by professional exchange and collaboration, as together we create a Biodynamic training that speaks to our diverse regions.

Application: Please submit your training suggestion at the [Link](#) by 15/08/22

Trainer exchange: In the last 3 days of the workshop, we will be conducting trainer to trainer feedback and further learning to deepen our capacities and intentions as trainers in Africa.

Join us if:

- You would like to become a Biodynamic trainer
- You are working in African Biodynamic training and would like to share your experience
- You want to support the ongoing development of Biodynamic training in Africa.
